Action level exceeded

PEL not exceeded

Dose is accumulated with the OSHA 5 dB exchange rate and an 80 dBA threshold; the 8-hour TWA is projected from that dose. A projection from a short sample assumes the measured conditions continue for a full shift.

SESSION EVENTS

18:10	First reading at or above the 85 dBA action level	86.3 dBA
18:23	First reading at or above the 90 dBA permissible exposure limit	90.1 dBA

METHOD & LIMITATIONS

Measurements were taken with the device microphone via the browser at 1 sample per second, with a fixed 94 dB calibration offset applied to the analyser output.

Consumer device microphones are not calibrated instruments. They compress loud sounds, roll off low frequencies, and vary between models, so absolute levels should be treated as indicative. Relative comparisons within a single session on a single device are considerably more reliable than absolute values.

For measurements used in a regulatory filing, an OSHA record, or a legal dispute, use a Type 1 or Type 2 sound level meter calibrated before and after the measurement.
